Normal Distributions

Reporting Category Statistics

Topic Analyzing and using the standard normal curve

Primary SOL All.11 The student will identify properties of a normal distribution and

apply those properties to determine probabilities associated with

areas under the standard normal curve.

Related SOL A.9

Materials

Graphing calculators

Normal curve graph paper

Seven attached handouts

Vocabulary

mean, median, mode, standard deviation, z-score, probability, quartile (earlier grades) normal distribution, normal curve, percentile, area under a curve, probability density function, discrete vs. continuous data (All.11)

Student/Teacher Actions (what students and teachers should be doing to facilitate learning)

- Distribute copies of the attached Statistics Review handout, and have students complete it individually or in pairs. When they are finished, have the whole class discuss the problems. (Note: This activity reviews critical concepts necessary for understanding and interpreting normal distributions and problems associated with them; therefore, a thorough discussion of the results is important.)
- 2. Distribute copies of the attached Normal Distribution Explorations 1 handout, and have students work in small groups to discuss and complete it. When students are finished, have the whole class discuss the problem. (Note: This problem connects discrete data and a histogram with the normal curve. Emphasis should be placed on interpreting the meaning of the height of each bar and the sum of the heights of all the bars.)
- 3. Distribute copies of the attached Normal Distribution Explorations 2 handout. Because the analysis along with reading a z-table is new, have students participate in a whole-class activity to complete it. (Note: This activity focuses on finding area under a normal curve and interpreting the associated probability. The exercise can be done with the attached Standard Normal Probabilities Tables or a calculator.)
- 4. Review the properties of normal curves and the empirical or 68-95-99.7 rule related to how data is position in a normal distribution. Then, distribute copies of the attached Normal Distribution Exercises and Normal Distribution Practice handouts, and have students use the practice handout to complete the exercises.
- 5. Distribute copies of the attached Normal Distribution Explorations 3 handout, and have students work in pairs to complete it, discussing strategies they might use to identify the mean and standard deviations for each graph.

Assessment

Questions

- o What are some ways area under a standard normal curve is interpreted?
- Why is the area under a normal curve equal to one?

• Journal/Writing Prompts

- Explain what kinds of things you would look for in a data set that would indicate that the set is normally distributed. Provide examples, and explain your rationale.
- Describe a z-score in your own words.

Strategies for Differentiation

- Teach this topic over a longer period of time, using smaller amounts of information in each lesson.
- Create a human line plot according to students' heights, and discuss how "normal" it is.
- Have students create and use flash cards with vocabulary on one side and descriptions or pictures on the other.
- Use an interactive whiteboard to demonstrate shading under the standard normal curve and to model use of a Standard Normal Table.

Statistics Review

Problem 1

You are given the data set {13, 10, 2, 2, 4, 12, 8, 6, 5, 9, 11, 14, 11, 8, 5, 8}.

- 1. Find the mean, median, and mode.
- 2. Add two different data values to the set that will not affect the mean, median, or mode.
- 3. Construct a histogram of the data, including the data values you added.
- 4. Using a calculator, find the standard deviation of the data set, including the new values.
- 5. Which values are within 1 standard deviation of the mean? Are any data values more than 2 standard deviations from the mean?
- 6. Add two more data values, one above and one below the mean, which will increase the standard deviation. Calculate the new standard deviation.

Problem 2

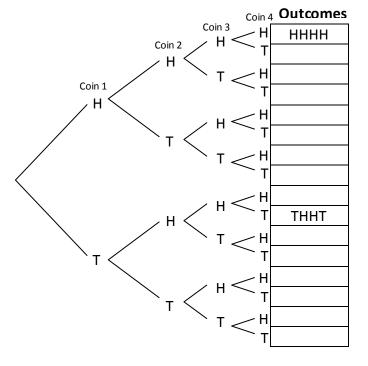

A z-score indicates the location of a data value relative to the mean in terms of standard deviation units. You are given a data set with a mean of $\mu = 10$ and a standard deviation of $\sigma = 2$.

- 1. Why would a data value of 12 have a z-score of 1? Why would a data value of 8 have a z-score of -1?
- 2. What z-score would be assigned to 6? To 14? To 5? To 20?
- 3. What data value would have a z-score of -3? Of 4? Of 0? Of 2.5?
- 4. Write a formula to determine the z-score for any value, x, in this data set.

Problem 3

An experiment consists of flipping four coins and recording the number of heads.

- 1. Complete the table of possible outcomes shown at right.
- 2. Are all outcomes equally likely? Why, or why not?
- 3. What is the probability of getting THHT? Of getting TTHH? Of getting HHHH?
- 4. What is the probability of getting exactly 4 heads? Of getting 2 heads and 2 tails? Of getting 1 head and 3 tails?
- 5. What is the sum of all the probabilities?

Normal Distribution Exploration 1

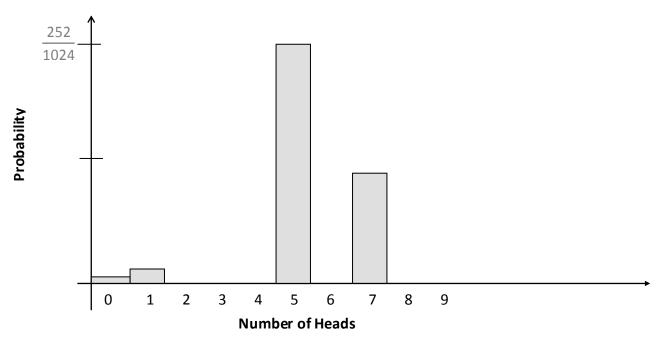

Problem

What is normal? What makes normal curves different? If you flip 10 coins 1,024 times, what is the total number of times you will get heads? You can test this if you want, but let's first focus on the theoretical probabilities. Using *combinations*, we can obtain the expected values and theoretical probabilities shown in the table.

Number of heads	Expected frequency value out of 1,024	Theoretical probability	Percent likelihood		
0	1	<u>1</u> 1024			
1	10	10 1024			
2	45	45 1024			
3	120	120 1024			
4	210	210 1024			
5	252	252 1024			
6	210	210 1024			
7	120	120 1024			
8	45	45 1024			
9	10	$\frac{10}{1024}$			
10	1	1 1024			

- What is the sum of all the probabilities?
- 2. Complete the percent likelihood by converting the theoretical probability to a decimal.
- 3. What observations can you make about the data in the table so far?

4. On the axis below, complete the histogram of the theoretical probability for each number of heads.

- 5. Draw a point at the midpoint of the top of each bar.
- 6. Connect the data points with a smooth curve
- 7. What do you observe about the graph's shape?
- 8. What do you observe about the graph's symmetry?
- 9. What do you observe about the graph's highest point?
- 10. What do you observe about the graph's mean/median/mode probability?
- 11. In the box below, read about the characteristics of a normal curve, and then describe how the curve you drew compares to a normal curve.

The graph of a normal distribution is a normal curve. Every normal curve has the following characteristics:

• The mean, median, and mode are equal.

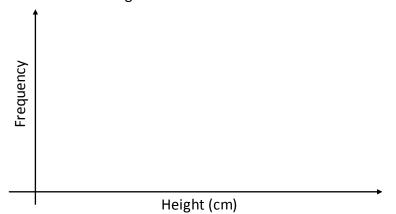

- They are bell-shaped and symmetrical about the mean.
- The curve never touches the x-axis, but it comes closer to the x-axis as it gets farther from the mean.
- The total area under the curve is equal to 1.

Normal Distribution Exploration 2

Problem 1

The table at right shows the heights of all fourth-grade students in a particular school, and the frequency of each height.

1. Construct a histogram of the data on the axis below.

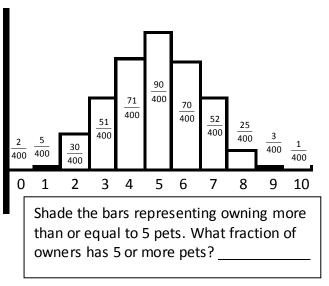

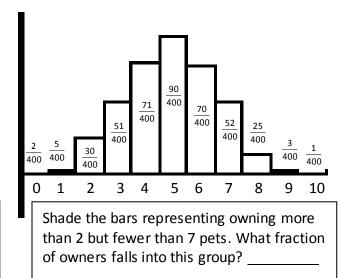

Frequency		
2		
7		
9		
20		
38		
18		
12		
10		
5		

- 2. What percentage of the students is shorter than 135 cm?
- 3. What is the probability that the height of a randomly selected student would be greater than 132 cm but less than 138 cm?
- 4. How many fourth-grade students are represented in the data?
- 5. What is the mean height of the data set? _____
- 6. Does the data appear to be normally distributed? Why, or why not?

Problem 2

The graphs below reflect the number of pets veterinarians own. The value associated with each bar represents the fraction of veterinarians with that many pets.

Normal Distribution Exercises

Represent each of the following distributions on one of the normal distribution graphs found on the Normal Distribution Practice sheet. For each, show three standard deviations to the left and three standard deviations to the right of the mean.

- 1. A normal distribution with a mean of 7 and a standard deviation of 2.
- 2. A normal distribution with a mean of 500 and a standard deviation of 100.
- 3. The weights of cattle at the fair this year were normally distributed with a mean of 800 lbs. and a standard deviation of 65 lbs.
- 4. The amount of time a middle school student studies per night is normally distributed with a mean of 30 minutes and a standard deviation of 7 minutes.
- 5. The length of hair of a private in the army is normally distributed with a mean of 1 cm and a standard deviation of 0.3 cm.
- 6. The length of wear on Spinning Tires is normally distributed with a mean of 60,000 miles and a standard deviation of 5,000 miles. Shade the region under the curve that represents the fraction of tires that last between 50,000 miles and 70,000 miles. What fraction of tires does that represent?
- 7. The number of crackers in a box of Crackerbox Crackers is normally distributed with a mean of 75 and a standard deviation of 2. Shade the region under the curve that represents the probability that a box has between 73 and 77 crackers. What is that probability?
- 8. The length of time it takes to groom a dog at Shaggy's Pet Shoppe is normally distributed with a mean of 45 minutes and a standard deviation of 10 minutes. Shade the region under the curve that represents the percent of dog grooming times between 55 and 65 minutes. What is that percent?

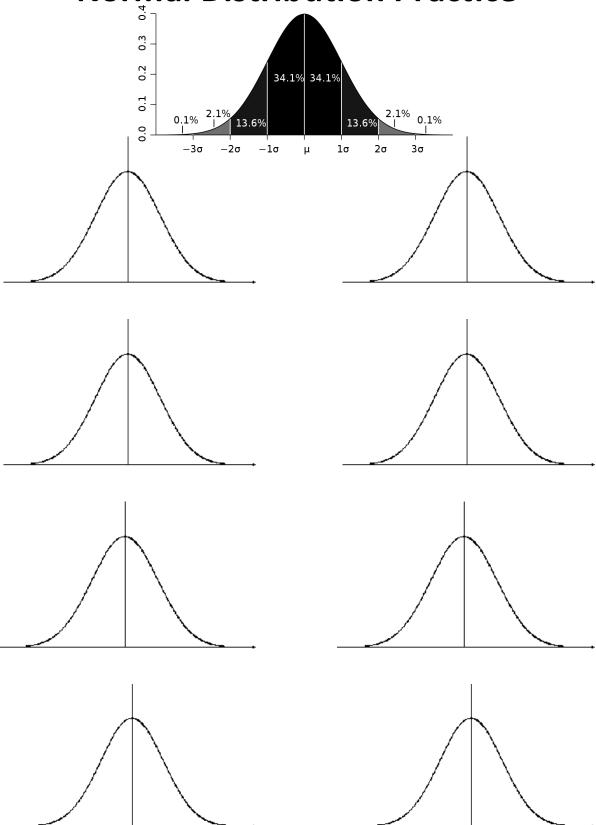

Complete the following problems:

1. The College of Knowledge gives an admission qualifying exam. The results are normally distributed with a mean of 500 and a standard deviation of 100. The admissions department would like to accept only students who score in the 65th percentile or better. Complete the chart below, and then determine which students would qualify and what score is associated with the 65th percentile. Which students qualify for admission?

Student score	z-score	Percentile
530		
570		
650		
800		
540		

- 2. The MP3 player, aPod, made by Mango Corp., has an average battery of 400 hours. Battery life for the aPod is normally distributed with a standard deviation of 25 hours. The MP3 player, PeaPod, made by Pineapple Inc., has an average battery life of 390 hours. The distribution for its battery life is also normally distributed with a standard deviation of 30 hours.
 - Find the z- scores for each battery with lives of 250, 350, 410, and 450 hours.
 - Which battery lasting 410 hours performed better?
 - What percent of aPod batteries last between 375 and 410 hours?
 - What percent of PeaPod batteries last more than 370 hours?
- 3. The braking distance for a Krazy-Car traveling at 50 mph is normally distributed with a mean of 50 ft. and a standard deviation of 5 ft. Answer the following without using a calculator or a table.
 - What is the likelihood a Krazy-Car will take more than 65 ft. to stop?
 - What is the probability a Krazy-Car will stop between 45 ft. and 55 ft.?
 - What percent of the time will a Krazy-Car traveling at 50 mph stop between 35 and 55 ft.?
 - What is the probability a Krazy-Car will require less than 50 ft. or more than 60 ft. to stop?

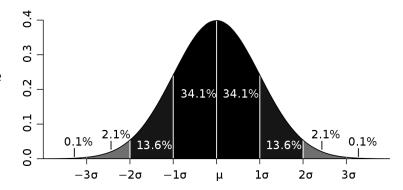

Normal Distribution Practice

Normal Distribution Exploration 3

Finding Area under a Normal Curve

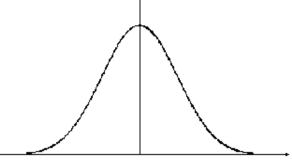

Areas can be found under a normal curve by using the 68-95-99.7 rule if the areas are bounded at places where an exact standard deviation occurs. Areas that are not bounded at specific standard deviation units can be found by using a calculator or a z-table.

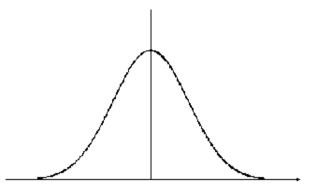

Problem 1

A corn chip factory packs chips in bags with normally distributed weights with a mean of 12.4 oz. and a standard deviation of 0.15 oz.

- 1. On the graph at right, label the mean and three standard deviations above and below the mean.
- 2. Shade the region that indicates the percentage of bags that contain less than 12.64 oz.
- 3. Determine the z-score corresponding to 12.64, using the formula z-score = $\frac{x \mu}{\sigma}$.

- 4. Use the Standard Normal Probabilities Table to find the area associated with the z-score obtained in 3, and interpret your result.
- 5. On the graph at right, label and shade the region that represents the likelihood a bag will contain between 12.1 and 12.76 oz.
- Calculate the z-scores corresponding to both 12.1 and 12.76, and find the Standard Normal Probabilities for each, using a calculator or the Standard Normal Probabilities Table.

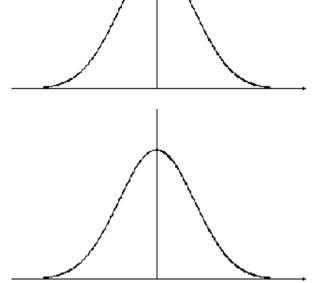

7. Explain how you would use those values to determine the probability a bag chosen at random will contain between 12.1 and 12.76 oz.

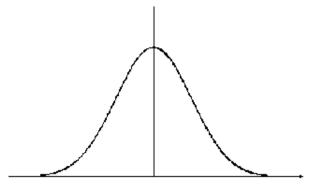

Problem 2

The lengths of adult unicorns' horns are normally distributed with a mean of 10.1 cm and a standard deviation of 1.04 cm.

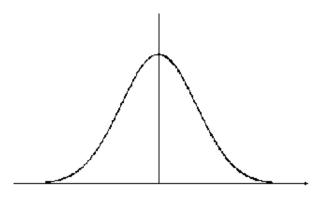

- 1. On the graph at right, label the mean and three standard deviations above and below the mean.
- 2. What percent of adult unicorns have horns shorter than 10.1 cm? _____ Longer than 10.1 cm? _____ Exactly 10.1? _____ (For this one, you need to create this normal curve on your calculator and find the value of *y* when *x* = 10.1. Your teacher may help.)

- 3. On the graph at right, shade the region that represents the probability of a unicorn's horn being longer than 9 cm. Calculate the area of that region by finding the appropriate z-score and using the Standard Normal Probabilities Table or a calculator. Interpret your result.
- 4. On the graph at right, shade the region that represents the probability of unicorn's horn being longer than 10.5 cm or less than 9.5 cm. Calculate the area of the associated regions by finding the appropriate z-score and using the Standard Normal Probabilities Table or a calculator. Interpret your result.

5. Challenge: In order for a unicorn to be admitted to college, her horn must be in the 75th percentile. That means 75% of the unicorns must have horns shorter than hers. On the graph at right, shade the region representing this area, and determine the value associated with the 75th percentile.

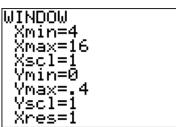

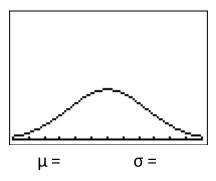

Problem 3

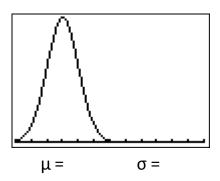

Graph each of the following normal curves in the same viewing window on a graphing calculator. The mean is either 7, 8, 9, or 10. The standard deviation is either 1, 1.5, 2, or 2.5.

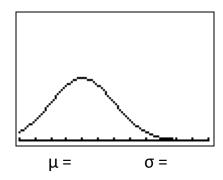

Use this information to determine the mean and standard deviation of each graph. Check your

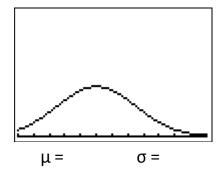

answers on the viewing window:

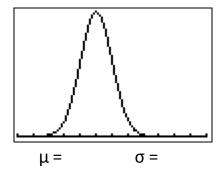

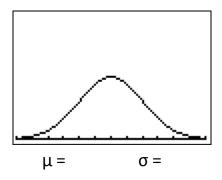

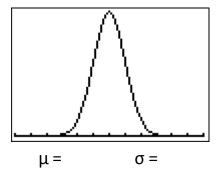

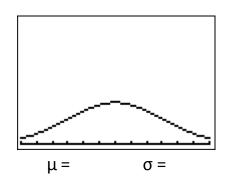

Standard Normal Probabilities Tables

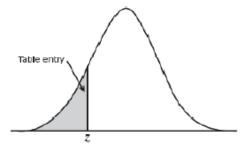

Table entry for z is the area under the standard normal curve to the left of z.
